

Cattle Yard Feed Slab - Taupo

PROJECT DESCRIPTION

A new grazing site near Taupo focused on protecting and caring for the land and animals.

This grazing site on Wairakei Estate adopted best environmental practices, doing the 'right thing by the land', as they are on free-draining soils.

The owners wanted a feed slab that would perform in the harsh Waikato environment but also stand up to the daily operations of a farm.

The decision was made to use Forta Ferro Synthetic Fibre as the reinforcement for this slab. FORTA-FERRO macro synthetic fibers at a specified dosage of 3kg/m³ was used to construct a Slab on Grade rural feed pad. The elimination of costly steel in many areas allowed contractors to save both time and money, while still capitalizing on FORTA-FERRO's reinforcement capabilities.

KEY POINTS

- Innovative Solution
- Enhanced Performance
- Saved time and money

DETAILS

Date: October 2013

Location: Taupo

Fibre: Forta Ferro[®]

Dosage: 3kg/m³

Concrete Supplier: Allied Concrete

Contractor: BuildWright Taupo
